

Constraint-Induced Movement Therapy (CIMT)

- Intensive therapy – casting the unaffected extremity to improve use of affected arm and hand
- Two-week casted + one-week bimanual training
- Evidence-based, most effective treatment for hemiplegia
 - Treatment within one year of injury – or by age two for birth-related injury – yields best results
- We have over 12 years of experience in CIMT
- Individual therapy or summer group options
