

Go Baby Go LifeScape

An Exciting New Opportunity

LifeScape has recently established a Go Baby Go chapter. Go Baby Go LifeScape will modify toy ride-on cars for children with mobility disabilities to give them a chance to play and socialize with their peers more easily. This chapter is part of the Go Baby Go program, an international movement, started at the University of Delaware.

Powered ride-on toys are a great way for all toddlers and preschoolers to move, play, and socialize with their friends and families. Social movement is critical for independence, learning, and brain development.

Many children with delayed movement cannot use toy cars right out of the box. Modifications will be made to allow the child to drive and be positioned safely using the following materials:

- Activation Switches
- Kick Boards
- Plastic Pipes
- Fabric Fasteners
- Foam Swim Noodles

Modifications provide the opportunity to learn cause-and-effect and how to engage in their environment and with peers.

How It Works

The goal of the Go Baby Go LifeScape chapter is to share the gift of movement! Ride-on cars provide children with disabilities a chance to have fun and just be kids!

Any family in our region with a potential driver is encouraged to apply. Recommended age of applicants is 1-4 years old. Older children will be considered, case by case, based on availability of larger cars.

This project is done in collaboration with our communities.
